OK, I'll reschedule it for the following Thursday. Will that work?

Hey Eunice,

The earthquake drill is smack dab in the middle of my big air conference. We were supposed to go to Georgia for it, but they last minute decided to do a 3 day webinar and hold it this spring instead. Everyone involved in EPA PEP and NPAP air programs must attend. It's running around 09:30-14:00 Tue, Wed, Thur this week. Is there any way to change that schedule or not attend? I guess I could see if wifi reaches out that far and bring the laptop? Jennifer and Karen have been attending as well. Thanks,

Joey

Hi Jennifer,

The evacuation route for the North Office Building occupants was decided years ago by the H&S Committee. It is the safest route away from potential down powerlines and also the quickest route to high ground in the event of a seiche.

Eunice

Hi Eunice,

I just wanted to confirm that the evacuation route for the North office building is a safe and reasonable route. Some of us wear sandals and there isn't really a maintained path up along the fence. It also seems counter intuitive to be trapped on the other side of the fence line.
